

SSI STANDARD B-SERIES

SPR-48 PULSE ISOLATION RELAY

DESCRIPTION

The SPR-48 is a 4-channel pulse isolation relay designed for high-density pulse applications where two RPR-24PS or SPR-24 relays would be required. Eight isolated solid-state Form A (K&Y) dry-contact outputs are provided, two each from four Form A inputs. The SPR-48 relay contains standard-duty solid state outputs. The wetting voltage provided by the SPR-48 to the sending devices (typically electric meters) is +13 VDC. The SPR-48 may be used with meters having semiconductor or electro-mechanical output contacts (relays).

SPR-48

The SPR-48 relay's Form A inputs feature input filtering circuitry to prevent noise from false triggering the outputs. Bright red and green LED indicators display the system status at all times, thus allowing a rapid check of the system's performance without requiring any additional test equipment. The SPR-48's input and output terminal strips are "Euro" type. When the stripped wire has been correctly installed in the terminal's slot, no conductive parts are exposed on the surface of the terminal strip, thus allowing the user maximum protection from accidental electrical shock. The "K" lead of the SPR-48's outputs are fused to prevent damage to the relays under almost any condition a user might cause such as excessive current, incorrect wiring, etc.

The SPR-48 has built-in MOV transient protection for the solid state relay contacts that eliminates the need for external protection. The SPR-48 is provided on a chassis mount panel and normally mounted inside another enclosure, suitable for the user's intended application. An optional NEMA 4X enclosure is available with the SPR-48 mounted on an internal mounting plate.
